Hypothetical Growth of \$10,000

As Of 06/28/2019

A hypothetical \$10,000 investment made in the fund ten years ago, or on commencement of operations for funds lacking a ten-year track record. Figures show monthly returns and include reinvestment of dividends and capital gains but do not reflect the effect of any applicable sales charges or redemption fees, which would lower these figures. This chart is not intended to imply any future performance of the fund.

MORNINGSTAR Data provided by Morningstar, Inc.

Investment Objective

Seeks both income and capital growth.

Strategy

Investing approximately 60% of assets in stocks and other equity securities and the remainder in bonds and other debt securities, including lower-quality debt securities, when its outlook is neutral. Investing at least 25% of total assets in fixed-income senior securities (including debt securities and preferred stock.) Engaging in transactions that have a leveraging effect on the fund.

Risk

Stock markets, especially foreign markets, are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Fixed income investments entail interest rate risk (as interest rates rise bond prices usually fall), the risk of issuer default, issuer credit risk and inflation risk. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. Lower-quality bonds can be more volatile and have greater risk of default than higher-quality bonds. Leverage can increase market exposure and magnify investment risk.

Additional Information

The Morningstar RatingTM for funds, or "star rating," is calculated for funds with at least a three-year history. (Exchange traded funds and open-end mutual funds are considered a single population for comparative purposes.) It is calculated based on a Morningstar risk-adjusted return measure that accounts for variation in a fund's monthly excess performance (excluding the effect of sales charges, if any), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each fund category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. Morningstar Rating is for the indicated share class only; other classes may have different performance characteristics. 2016 Morningstar, Inc. All rights reserved. It is not possible to invest directly in an index. All indices are unmanaged.

If applicable: *StyleMaps* estimate characteristics of a fund's equity holdings over two dimensions: market capitalization and valuation. The percentage of fund assets represented by these holdings is indicated besides each StyleMap. The position of the most recent publicly released full holdings is denoted on the StyleMap with a dot. Historical StyleMap characteristics are calculated for the shorter of either the past three years or the life of the fund, and are represented by the shading of the box(es) previously occupied by the dot.

Definitions

Alpha-Annualized A risk-adjusted performance measure. A positive (negative) alpha indicates stronger (poorer) fund performance than predicted by the fund's level of risk measured by beta. **Annualized Tracking Error** measures how closely the fund's returns have tracked an index. The standard deviation of the monthly differences between the fund return and the index return over a 36 month rolling time horizon. **Annualized Turnover Rate** is the lesser of amounts of purchases or sales of long-term portfolio securities divided by the monthly average value of long-term securities owned by the fund. **Asset Allocation** refers to the makeup of a fund's portfolio expressed in categories such as stocks, bonds, real estate, etc., as a percentage of Net Assets. **Average Annual Total Return** A hypothetical rate of return if achieved annually would have produced the same cumulative total return if performance had been constant over the entire period. Average annual total returns smooth out variation in performance; they are not the same as actual year-by-year results. Total returns are historical and include changes in share price and reinvestment of dividends and capital gains, if any. **Beta** a measure of the volatility of a fund relative to its benchmark. A beta greater (less) than 1 is more (less) volatile than the index. **Downside Volatility** measures the volatility of a fund's returns below a minimum accepted level; calculated as the standard deviation of a fund's under-performance relative to the benchmark. **Expense Net of Waivers** reflects expenses after reimbursement by the investment adviser but prior to reductions from expense offset arrangements. 130/30 Large Cap incurs interest and dividend expenses on short positions that are not reimbursed under the expense cap; therefore, net expenses may exceed the Expense Cap **Foreign Investments** percentage of portfolio holdings in foreign investments.

Gross Expense Ratio is the total annual class operating expense ratio from the most recent prospectus and generally is based on amounts incurred during the most recent fiscal year. **Information Ratio** measures a fund's active return (fund's average monthly return minus the benchmark's average monthly return) in relation to the volatility of its active returns. **Net Expense Ratio** is an annualized figure that reflects amounts reimbursed by Fidelity or reductions from brokerage service or other expense offset arrangements, if any, and is updated as the annual or semiannual information is available. Net Expense Ratio could be higher than the Gross Expense Ratio due to different reporting dates and fluctuations in expenses and/or asset levels. **Relative Volatility** compares a funds volatility to a benchmark. A relative volatility greater (less) than 1 means the funds returns have been more (less) variable. **R-Squared**(R²) measures how a funds performance correlates with a benchmark indexs performance and shows what portion of it can be explained by the performance of the overall market/index. R² ranges from 0, meaning no correlation, to 1, meaning performance correlation. **Sharpe Ratio** is a measure of historical adjusted performance calculated by dividing the fund's excess returns (fund's average monthly returns minus the average monthly return of the Salomon Smith Barney 3-Month T-Bill Index) by the standard deviation of those returns. The higher the ratio, the better the fund's return per unit of risk. **Standard Deviation** measures the historical volatility of a fund. The greater the standard deviation, the greater the funds volatility. **Top Industry Holdings** diversification of fund assets by major industry, arranged by weighting from largest to smallest positions on the dates shown.
